Building Better Organizations –
The Lean Way

Lean Systems
Overview

Institute for Lean Systems

©2013, ILS. All rights reserved

Agenda

- Introduction/historical overview
  - ILS Card simulation Round 1
- Lean Basics
  - ILS Card simulation Round 2
- Critical Lean Tools
  - 5S & Motion Economy
  - Standardized work
  - ILS Card Simulation Rounds 3, 4, and 5
- Wrap up

©2013, ILS. All rights reserved

Course Objectives

- Become a lean organization
  - Understand the philosophy behind the success of great companies, and how you can use it to take yours to higher levels of success
  - See the value and the waste in your processes and systematically enhance the value while eliminating waste, increasing your capacity and profitability
  - Create work flow to improve delivery to your customers and ensure perfect quality
- Become a lean team member
  - Describe how everyone in the lean organization contributes to success
  - Apply basic tools of 5S/Visual control (using motion economy principles) and Standardized work

©2013, ILS. All rights reserved

Desired Outcomes

ILS Card Simulation

Baseline Round,

Conventional thinking…

©2013, ILS. All rights reserved

Conventional systems

- Structure
  - Functional (requires sharing)
  - Defined by routing
  - Economies of scale - batching
  - Control systems
    - Scheduling
    - Tracking
    - Financial controls
  - Management
- Performance?
  - Production lead time
  - Work in process
  - Transportation & handling
  - Labor utilization
  - Control
  - Space
  - Responsiveness to customer
  - Performance measurement

©2013, ILS. All rights reserved

Lean is…

- … a people-oriented philosophy where organizations succeed by delivering the greatest value to their customers

©2013, ILS. All rights reserved

Focus

Conventional Focus

cost + profit = price

Lean Focus

price - cost = profit

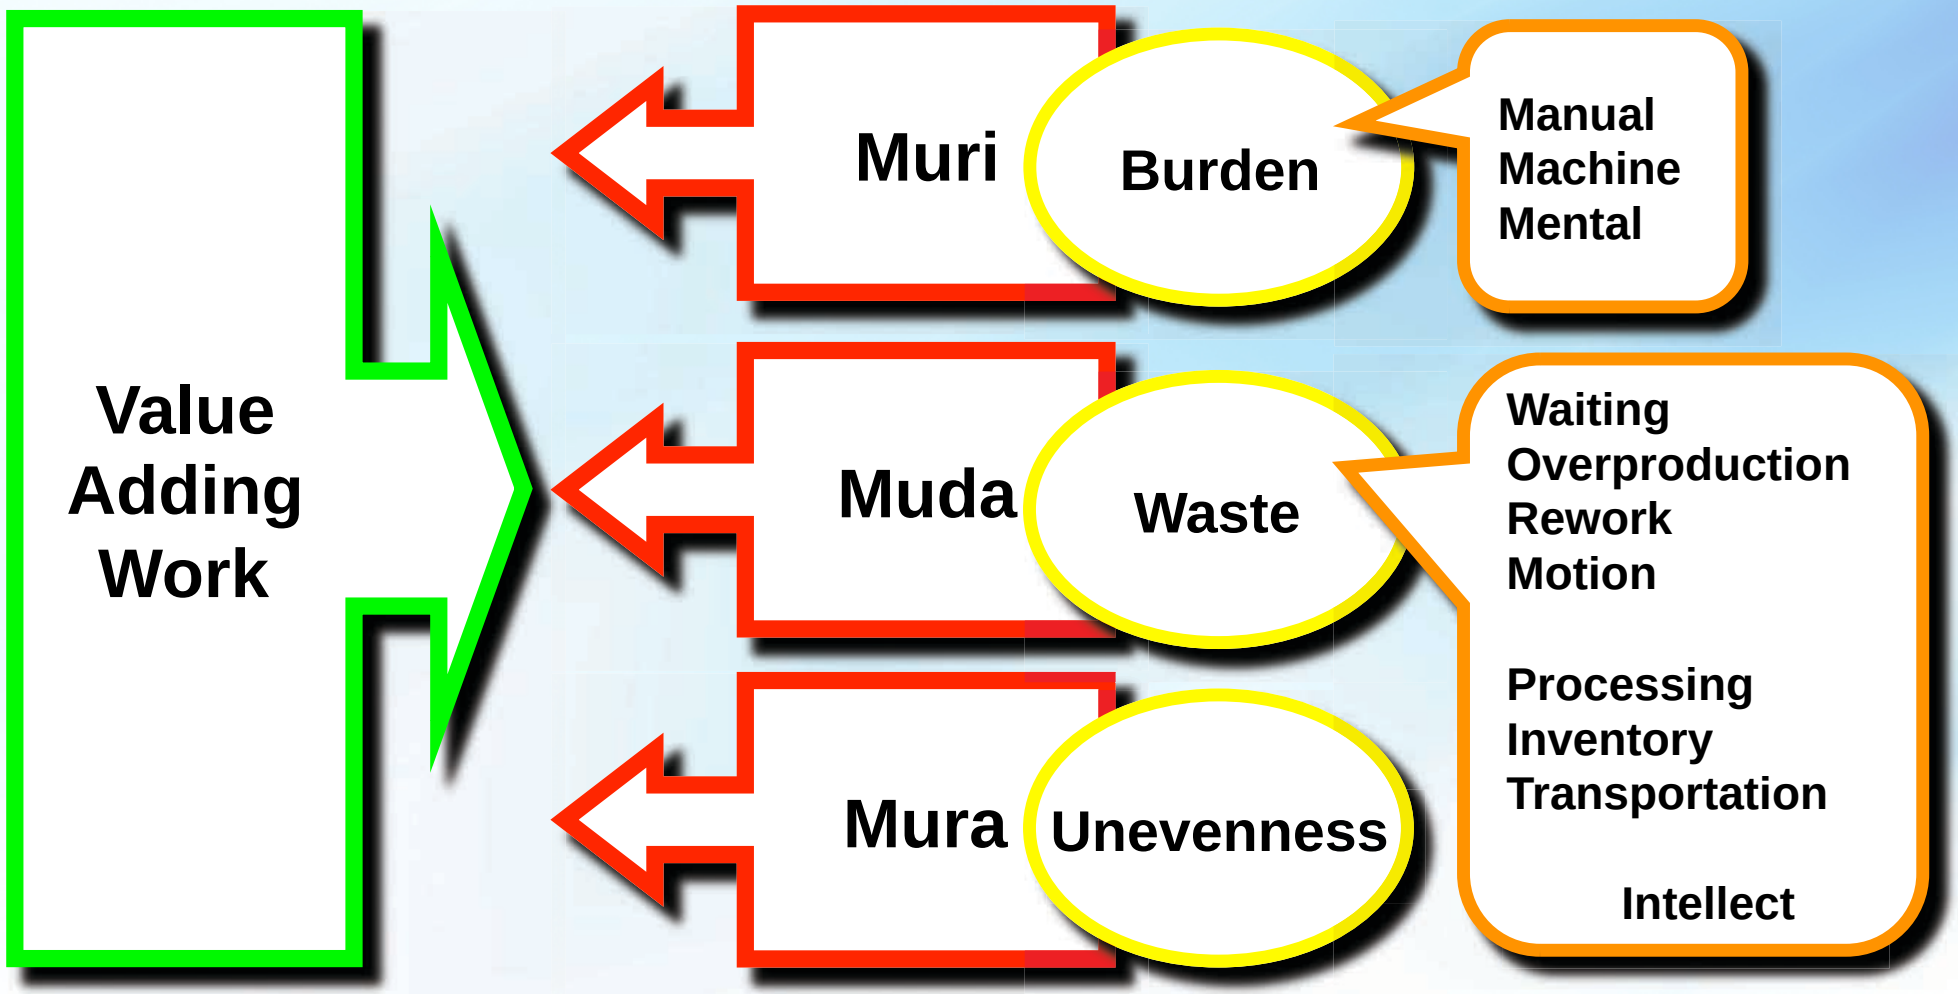
©2013, ILS. All rights reserved

Value

$$\text{Value} = \frac{\text{What it's worth}}{\text{What it costs}}$$

©2013, ILS. All rights reserved

Value v. Waste



©2013, ILS. All rights reserved

8 Forms of Waste - the WORMPIT

- Waiting
  - Idle time due to lack of materials, equipment cycling time or lack of information.
- Over-production
  - Making more product than the customer wants.
- Rework/Rejects
  - Products not meeting the quality standards of our company and our customers.
- Motion
  - Any movement of people that does not add value to the product.

©2013, ILS. All rights reserved

8 Forms of Waste - the WORMPIT

- Processing
  - Performing any process that is not required to make or assemble a product.
- Inventory
  - Excess finished products, in-process products, raw materials, or information. All of these hide other problems.
- Transportation
  - Any movement of materials, work in process, or finished goods
- Intellect
  - Failure to make best use of peoples' ideas, thoughts, and suggestions that lead to improvements. The ONLY way OUT of the WORMPIT!

Lean Systems
Flow Ideals

One Place; One Piece; One Pace; One Resource

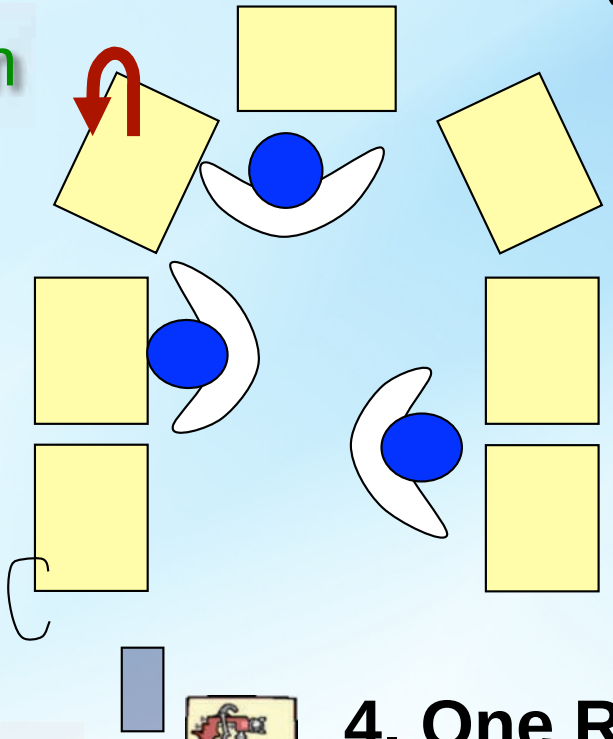
©2013, ILS. All rights reserved

Structural Ideals for Flow

1. One Place
(Work aggregation)

- Lean work system

2. One Piece
(Make one, move one)



3. One Pace
(Takt pacing and level loading)

- Jidoka management (Visual)

4. One Resource
(Selective resource dedication)

- Value stream management

©2013, ILS. All rights reserved

Ideal 1 – One Place

Round 2 - Creating work cells

Evolutionary Standardized Work

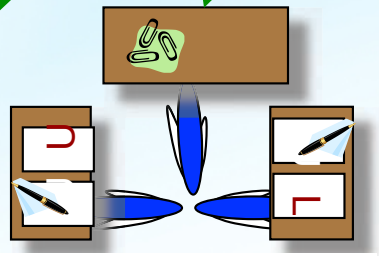
Beyond Skill

Lean Work System

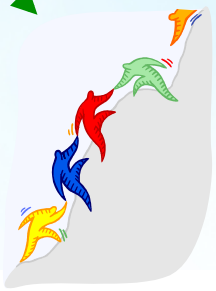
Focus principle

Learn by doing
… Simplify
… Automate

Method over process



Cross-Training



Teaming Contributions

©2013, ILS. All rights reserved

Standardized Work

The key tool in building and sustaining the right culture

©2013, ILS. All rights reserved

Standardized work

- Reliable work methods or procedures and sequences developed to achieve the most effective combination of people, materials and parts, and machinery and tools.
  - Focuses on the work itself
  - Teach team members consistently
- Team members/Operators must contribute to the preparation of the standardized work with documentation by team leaders and/or supporting staff (engineers, maintenance, etc.)
  - Only with specific planning will the team members be able to handle the documentation piece

©2013, ILS. All rights reserved

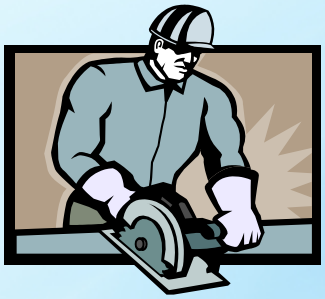
Goals of standardized work

- Understand the work
  - Use to organize the workplace and create a learning environment
  - Identify improvement opportunities
- Define the current best method
  - Use that method to train others
- Build in quality, ensure safety, cap inventory levels, and measure productivity
- Make problems visible
- Build team member confidence
  - Builds mastery-level skills
  - Gives them control over their environment

©2013, ILS. All rights reserved

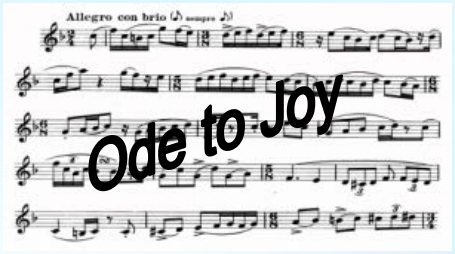
Standardized Work

The work process is scripted



Everyone follows the script with discipline

A problem in highly mature systems.



The script quickly evolves to a higher level

The team owns the script and is charged to learn and improve it.

©2013, ILS. All rights reserved

Enforcing standardized work

- Performance metrics related to quality (first time through, scrap rate, etc.) and tracked by the hour should provide immediate out-of-compliance feedback.
- Audit systems may be necessary in the early months, but soon become troublesome to keep up-to-date as the standardized work begins to change more and more frequently
  - Direct observation by someone familiar with the standardized work is required…usually the team leader

©2013, ILS. All rights reserved

Building Better Organizations –
The Lean Way

5S

The Transformation Starting Point

©2013, ILS. All rights reserved

5S

Sort

Set in Order

Shine

Standardize

Sustain

©2013, ILS. All rights reserved

5S – Why?

- Sets a foundation for other transformation activities
  - Builds in control, flexibility, lean work system, continuous improvement culture
- Sets ownership of processes
  - Everyone needs to do it!
- Contributes to value creation
  - Low cost – high benefit
  - Don’t think of 5S as “housekeeping”

©2013, ILS. All rights reserved

Positive impact of 5S

- Visibility & awareness of problems
- Supports team member ownership
- Eliminates safety hazards (slipping, tripping, pinching, body stress) for team members and visitors
- Easy way to get team member engagement
- Improves quality
  - Promotes repeatability, reduces errors
  - Supports maintenance (less abrasive wear, more cleaning)
  - Ensures proper disposition of materials
- Improves cost
  - Saves floor space
  - Labor efficiency improves (less walking around & searching)

©2013, ILS. All rights reserved

5S

Sort

Set in Order

Shine

Standardize

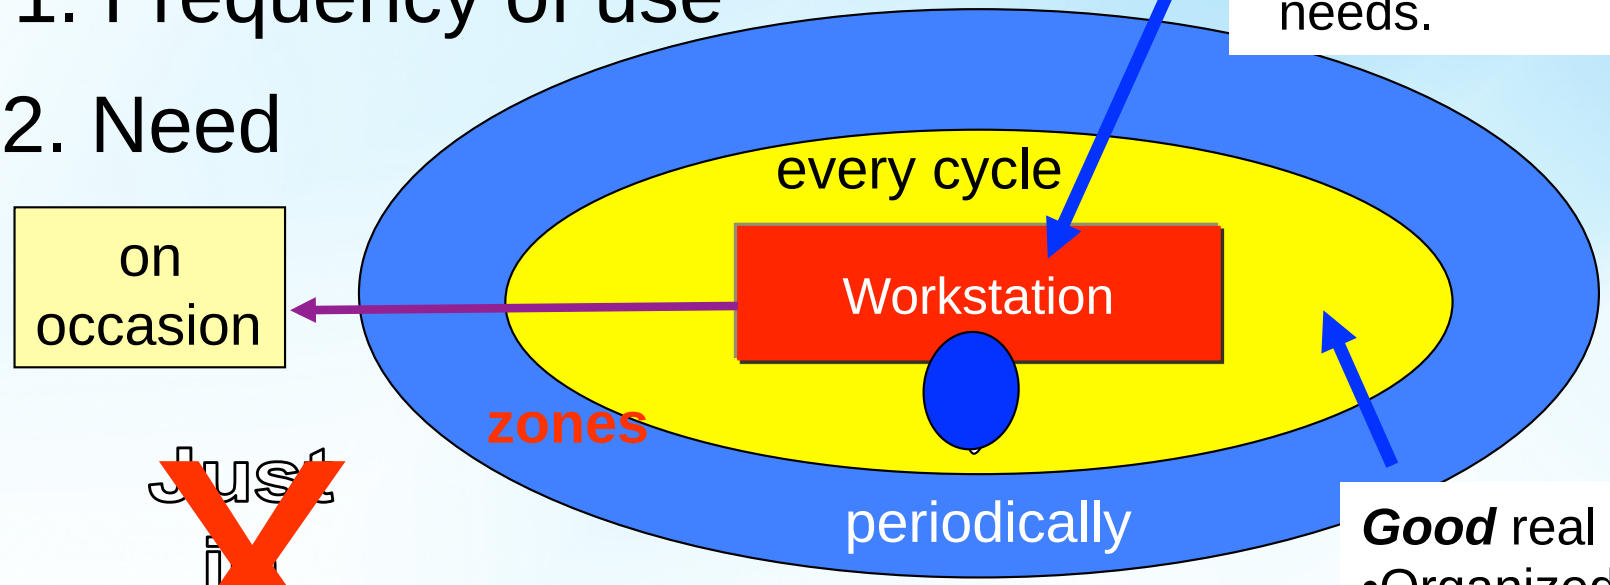
Sustain

©2013, ILS. All rights reserved

Sort

- Separate the necessary from the unnecessary
  - 2 Key Factors

1. Frequency of use
2. Need

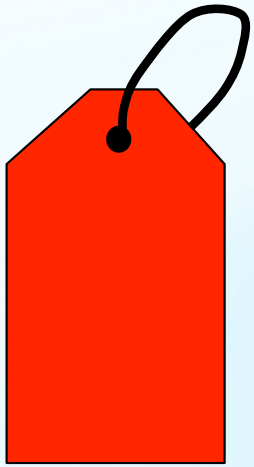


Premium real estate.
•Organized by *motion economy* principles and direct work support needs.

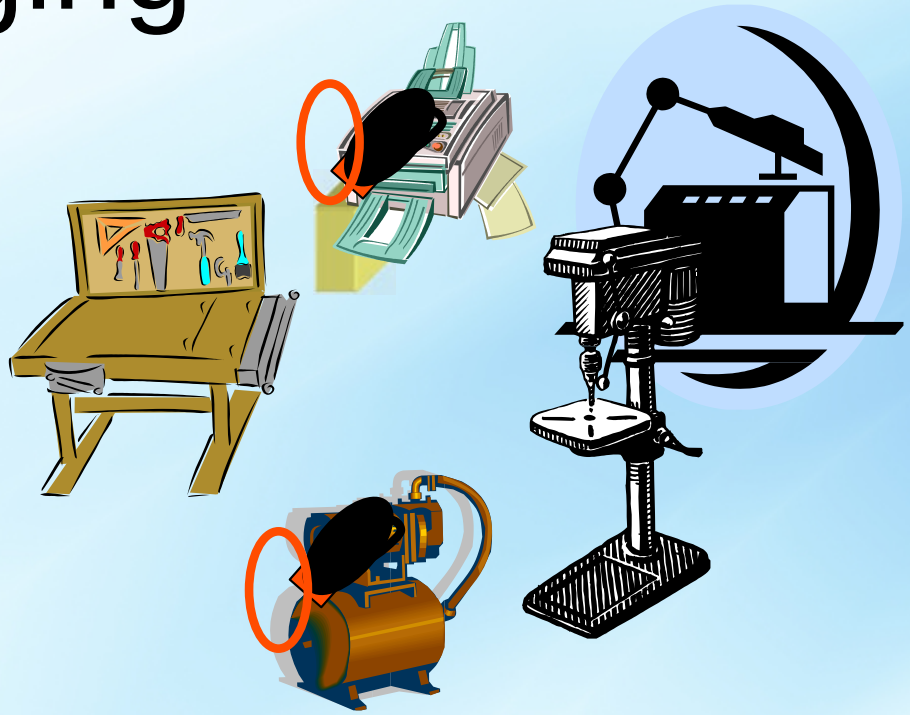
Good real estate.
•Organized to support work flow and logically organized to avoid searching

©2013, ILS. All rights reserved

Red tagging



Tag major items to be removed, then remove them to the Red Tag Area

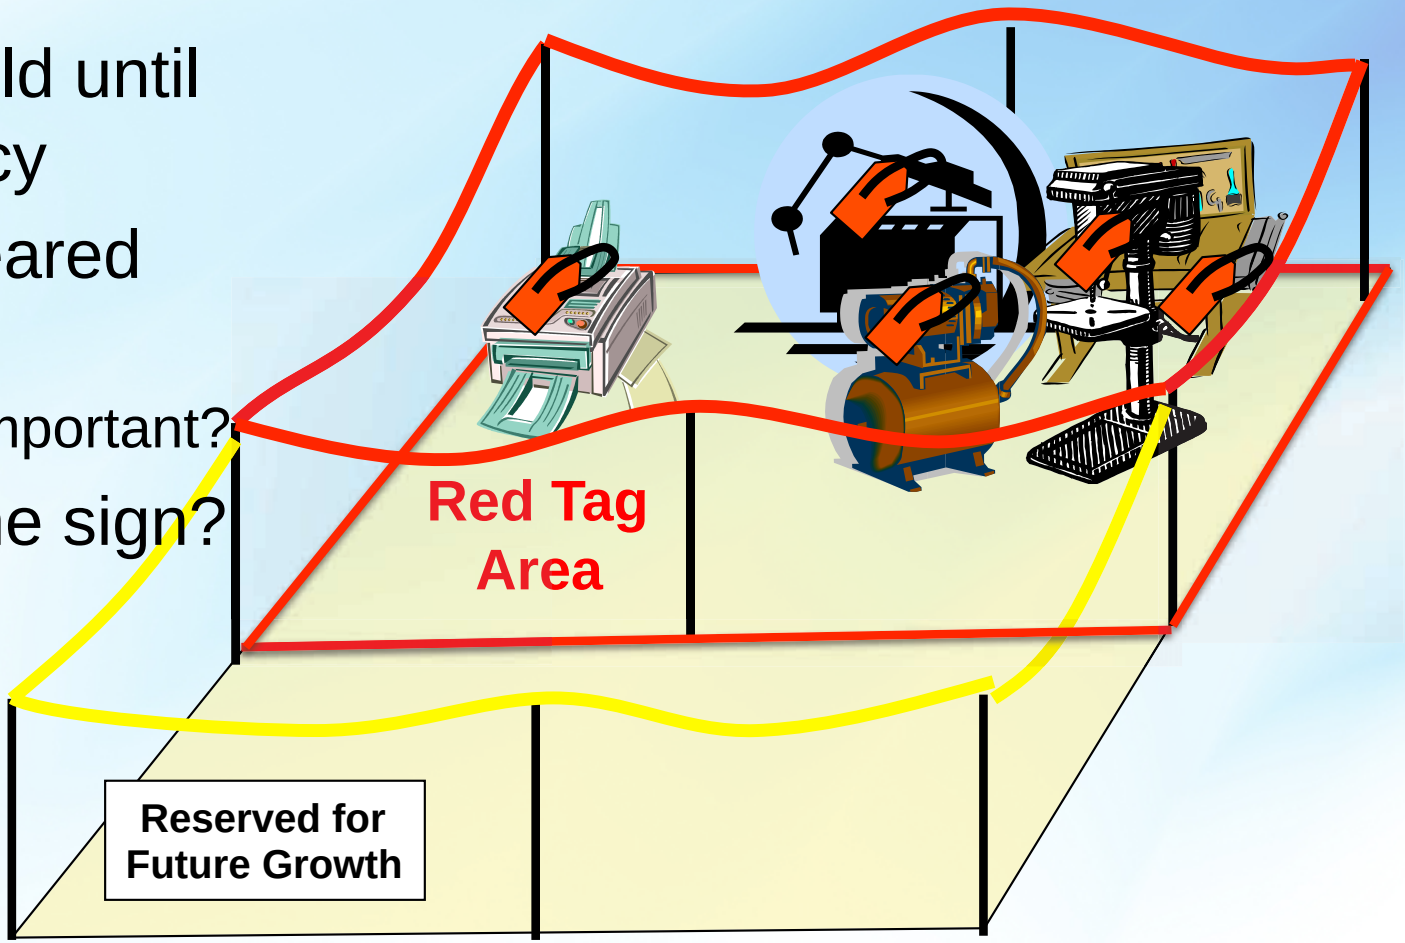


- Promotes effective removal and disposal
- Communicates status of sort process
- Motivates completion and continuation

©2013, ILS. All rights reserved

Red Tag Area

- Supports “sort” as an ongoing process
- Enables a “hold until time xxx” policy
- Cordon off cleared space
  - Why is this important?
- What about the sign?



©2013, ILS. All rights reserved

Classifying red-tagged items

- Classify based on the disposal action
  - Inventory categories
    - Dead stock
    - Excess
    - Defects/rework
  - Special disposal requirements
    - Chemicals and hazardous materials
  - Scrap value
  - Potential for use in other locations
  - Privacy issues (especially for office 5S)

©2013, ILS. All rights reserved

5S

Sort

Set in Order

Shine

Standardize

Sustain

©2013, ILS. All rights reserved

Set in Order

- A place for everything, and everything in its place
- What are some of the major goals of organization?
  - Eliminate wasted time spent searching
  - Compactness, saving space and time
  - Simplify by eliminating decisions and insuring the natural way is the correct way
  - Making readiness and status visible
  - Supporting standardized work and quality

©2013, ILS. All rights reserved

©2013, ILS. All rights reserved

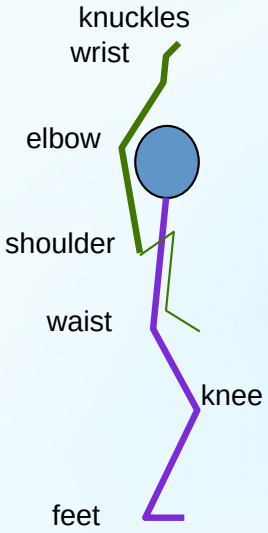
Workstation Layout

- Consider the work layout and sequence
  - Layout so that one motion naturally follows next without unnecessary motion
  - Distribute parts around the work area
    - Avoid two workers having to use the same part source. Replicate the part source.
  - When you transfer to the next station…
    - Position for ease of reach of next worker
    - Grasp your next part with the other hand while dropping part off

©2013, ILS. All rights reserved

Motion Economy

- Body Segment Class Definitions



Class	Joint Involved	Body Segment
1	Knuckles	Fingers
2	Wrist	Hand + Fingers
3	Elbow	Forearm+Hand+Fingers
4	Shoulder	Upper arm+Forearm+Hand+Fingers

- Seek lower class movements first
  - Key strategy: compact workstation layout
- Example:
  - What class is the motion required to operate your car?

©2013, ILS. All rights reserved

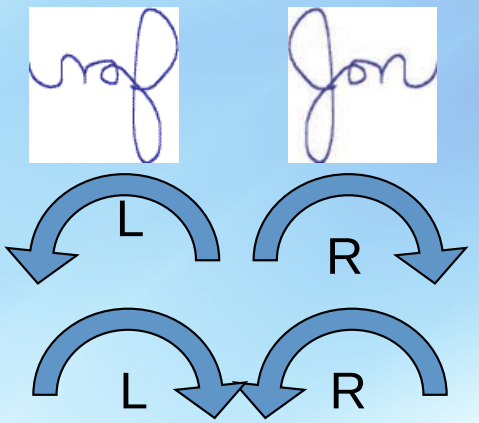
Motion Economy

- A place for everything and everything in its place
  - Outlined storage areas.
    - Avoids searching, Faster visual perception
- Most frequently tools close, less frequently used tools far away
- Position tools in sequence of use
- Seek blindfold tool retrieval and release
  - Spring cord mounted, mesh bags
- Combine multiple tools in one if possible
- Design levers/hand wheels for maximum mechanical advantage and easy reach
  - Should not have to reposition body to work lever or wheel

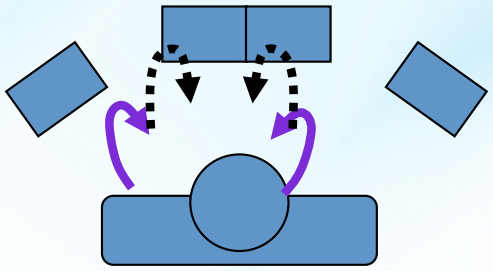
©2013, ILS. All rights reserved

Hands and Arms

- Key idea: work with both hands, not one
  - Seek mirror-image motion
    - Start and stop hands concurrently
    - Move arms and hands symmetrically to and from center of body
    - Lay out parts/tools symmetrically
    - Simple strategy to increase symmetry: make things in twos
  - Both hands should never be idle concurrently
  - Let fixtures hold parts, not hands
    - Hand is world's most expensive fixture
    - Holding parts is also fatiguing



Think of swimming



©2013, ILS. All rights reserved

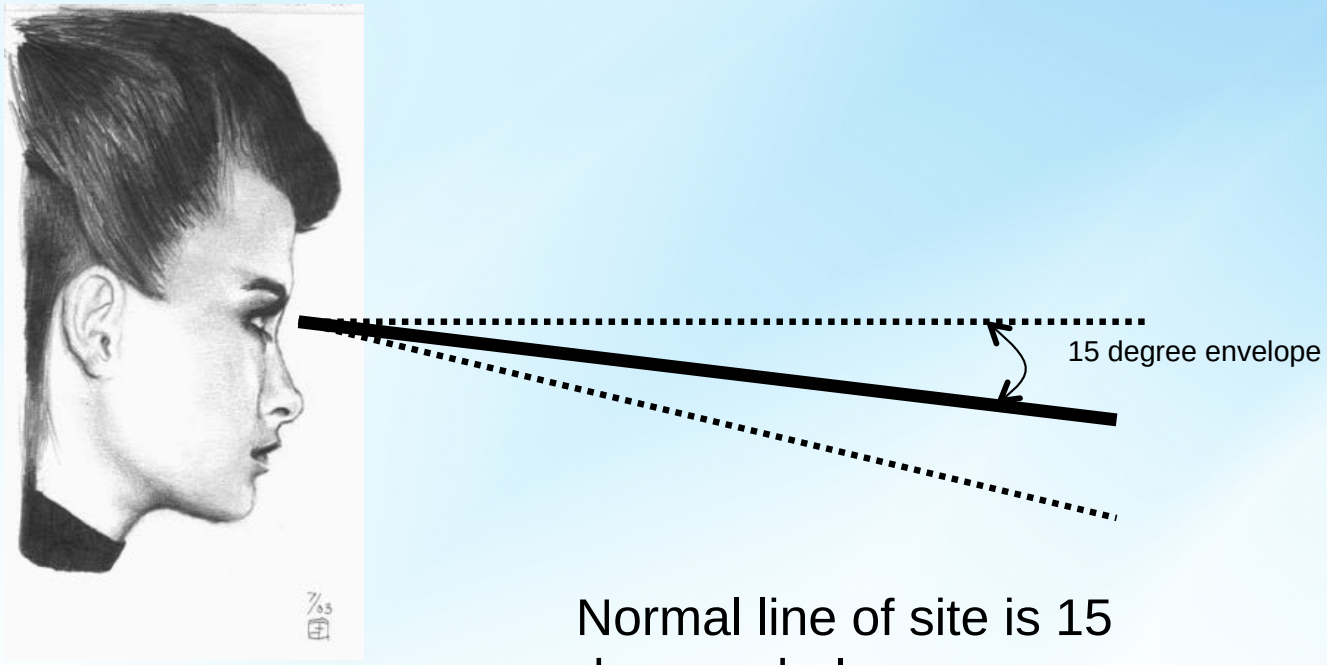
Hands and Arms

- Try to avoid movement of parts by hands. Use other means:
  - Gravity
    - Drop scrap into hole; don't pitch into distant container
    - Tilted parts container minimizes reach since parts slide down
    - Use gravity to present parts and to remove work piece
  - Mechanical movement
  - Slide (small/light) parts across the work surface; do not lift and carry them.
    - Design work surface to permit and facilitate this.

©2013, ILS. All rights reserved

Eyes

- Avoid need for eye movements if practical

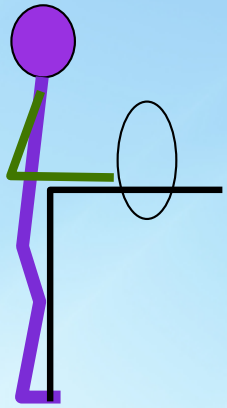


Normal line of site is 15 degrees below horizontal

©2013, ILS. All rights reserved

Additional Principles

- Ergonomic work surface is positioned elbow height
  - Forearm parallel to ground
- Put your feet to work too
  - Especially switches
  - Work hands and feet concurrently. (E.g., driving a car)
- Workers should generally be standing
  - Facilitates multi-process work design and high utilization
  - Facilitates teamwork and response to the abnormal
  - Ergonomically designed sit/stand chairs are acceptable
- 4 - 5’ distance across U-cell is ideal
  - Adequate to avoid worker interference
  - Minimum number of steps to cross



©2013, ILS. All rights reserved

Video Example

©2013, ILS. All rights reserved

Video Example

5S

Sort

Set in Order

Shine

Standardize

Sustain

©2013, ILS. All rights reserved

Shine

- Clean up
- Paint
- Illuminate
  - Impact on morale
  - Visibility

©2013, ILS. All rights reserved

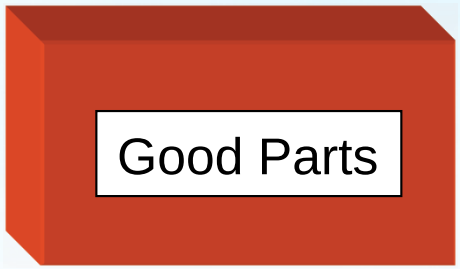
Visibility

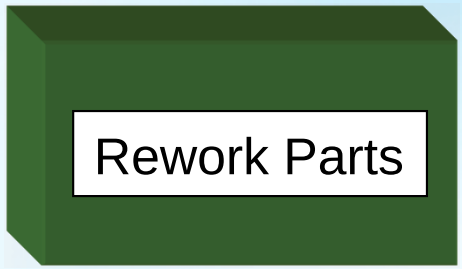
- Support vision and rapid perception:
  - Good illumination is essential to fast perception and reduction of time
  - Enhance contrast between work object and background for rapid perception
  - Avoid glare through reflection or light sources near line of sight
  - Increase size of object to be seen if possible
    - E.g., key visual controls, handles, etc.
  - Avoid need to perceive object while worker is moving
  - Apply standard uses of color (red, yellow, green) to indicate status

©2013, ILS. All rights reserved

Use color

- Do not violate common assumptions
- Use color to convey meaning





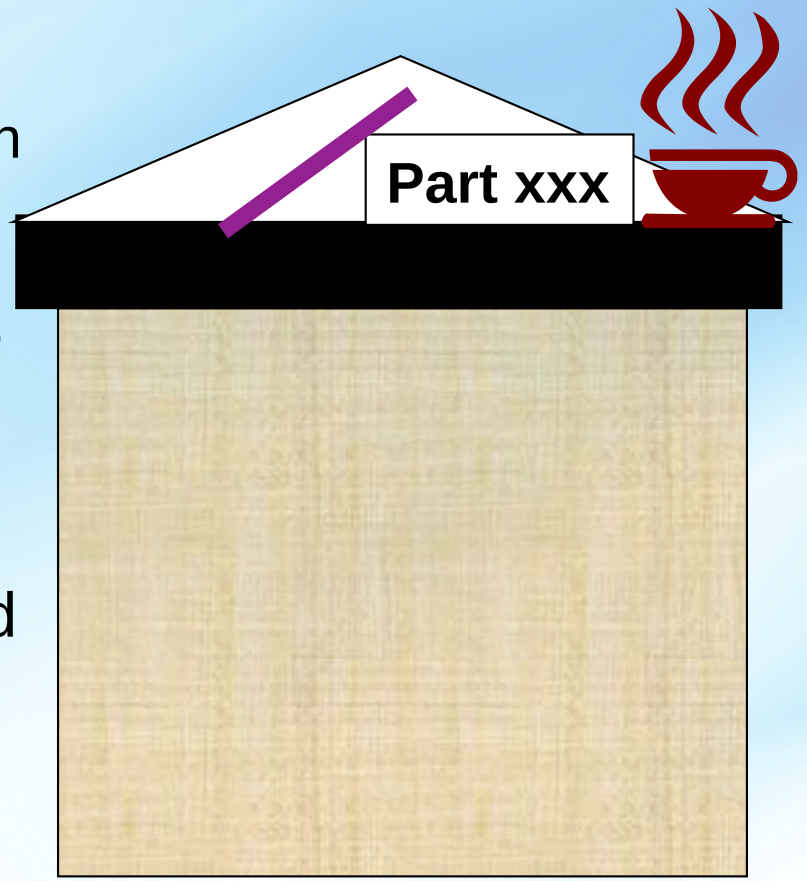
General Trash

Yard Waste

©2013, ILS. All rights reserved

Make Clean up Easy

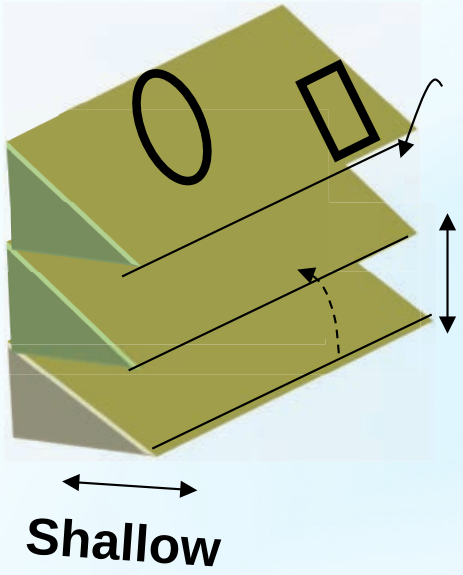
- Eliminate sources of dust, dirt, and clutter
  - Use skirts, shields, and covers to prevent accumulations in hard to clean places
  - Schedule regular clean ups
- Contain waste as close as possible to the source
- Organize the work for easy cleaning
  - Tape backing disposal
- Keep cleaning supplies organized and handy
- Integrate cleaning up with machine inspections



©2013, ILS. All rights reserved

Organizing principles

Shelves: generally used for low frequency items.

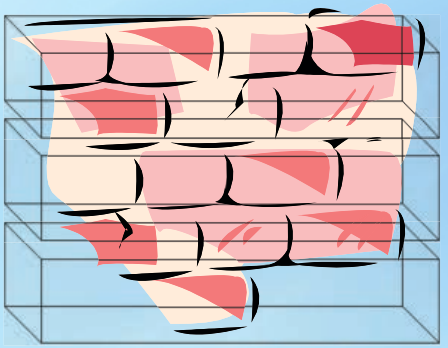


Shallow

Tilted surface preferred

Wide access

Avoid stacking items if possible



Location along walls preferred

Post maps identifying locations

	1	2	3	4	5	6
A						
B						
C						
D						

Addressing

Labels

Min/max

Hoses & forms

Boxes

Dedicate aisles organized functionally or by kits

Position items by frequency

©2013, ILS. All rights reserved

Outlining and Shadowboxes

- Uses
  - Faster visual perception
  - Verification
- Good method for flat items
  - Photocopy and laminate

©2013, ILS. All rights reserved

5S

Sort

Set in Order

Shine

Standardize

Sustain

©2013, ILS. All rights reserved

Standardize

- Standardize the system and the practices to support it
- When possible and appropriate, standardize across the organization

©2013, ILS. All rights reserved

Green Team

Red Team

©2013, ILS. All rights reserved

5S

Sort

Set in Order

Shine

Standardize

Sustain

©2013, ILS. All rights reserved

Sustain

- Previously mentioned components of sustain
  - Periodic red-tag campaigns
  - Leadership of the 5S process.
    - Publicity
      - » Before/after photos
    - Modeling by top leaders
  - Make cleanup easy
- Many of these make the 5S system self-sustaining
- Auditing
  - May be required early to build good 5S habits

©2013, ILS. All rights reserved

Flow Ideals

- One place
  - Bring together all required work into a co-located cell
  - Enables the Lean Work System
- One piece
  - Make one, move one
  - Enables velocity
- One pace
  - Everything moves through the work system at the same rate
  - Enables visibility and stresses the system
- One resource
  - Selective dedication of available resources
  - Enables all the other ideals

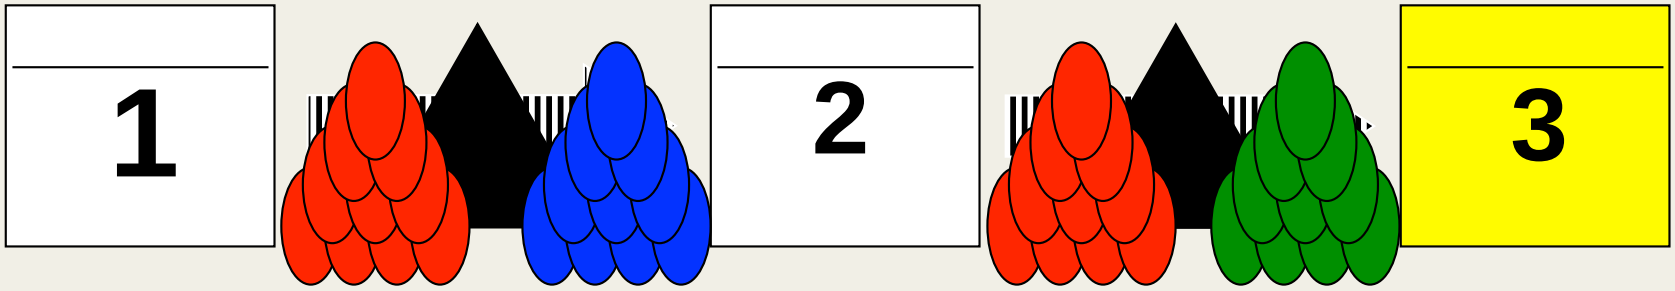
©2013, ILS. All rights reserved

Ideal 2- One Piece

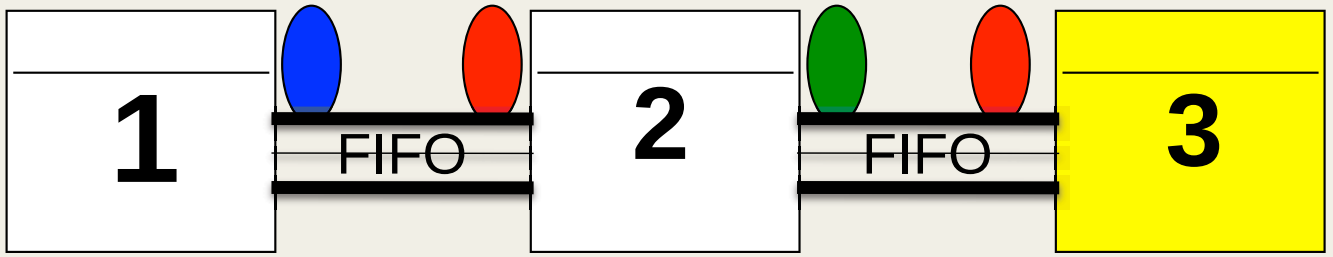
Increasing the Velocity of the System

©2013, ILS. All rights reserved

One Piece



4 Batches of WIP



4 *Pieces* of WIP

©2013, ILS. All rights reserved

Organizing for One Piece

- Insure First In First Out (FIFO)
  - Auto-advance
  - Forklift access
  - Visual WIP cap
  - Sequence discipline
- Why is this important?
  - Traceability
  - Schedule adherence
  - Obsolescence
  - Simplified information systems

©2013, ILS. All rights reserved

One Piece

- Make one, move one
- Rapid set up and Changeover (SMED)
- Co-location
- Multi-skilled team members
- Kitted work packages
- Milk-run replenishment
- Total Equipment Maintenance (Total Productive Maintenance – TPM)

Round 3 – Make one, move one

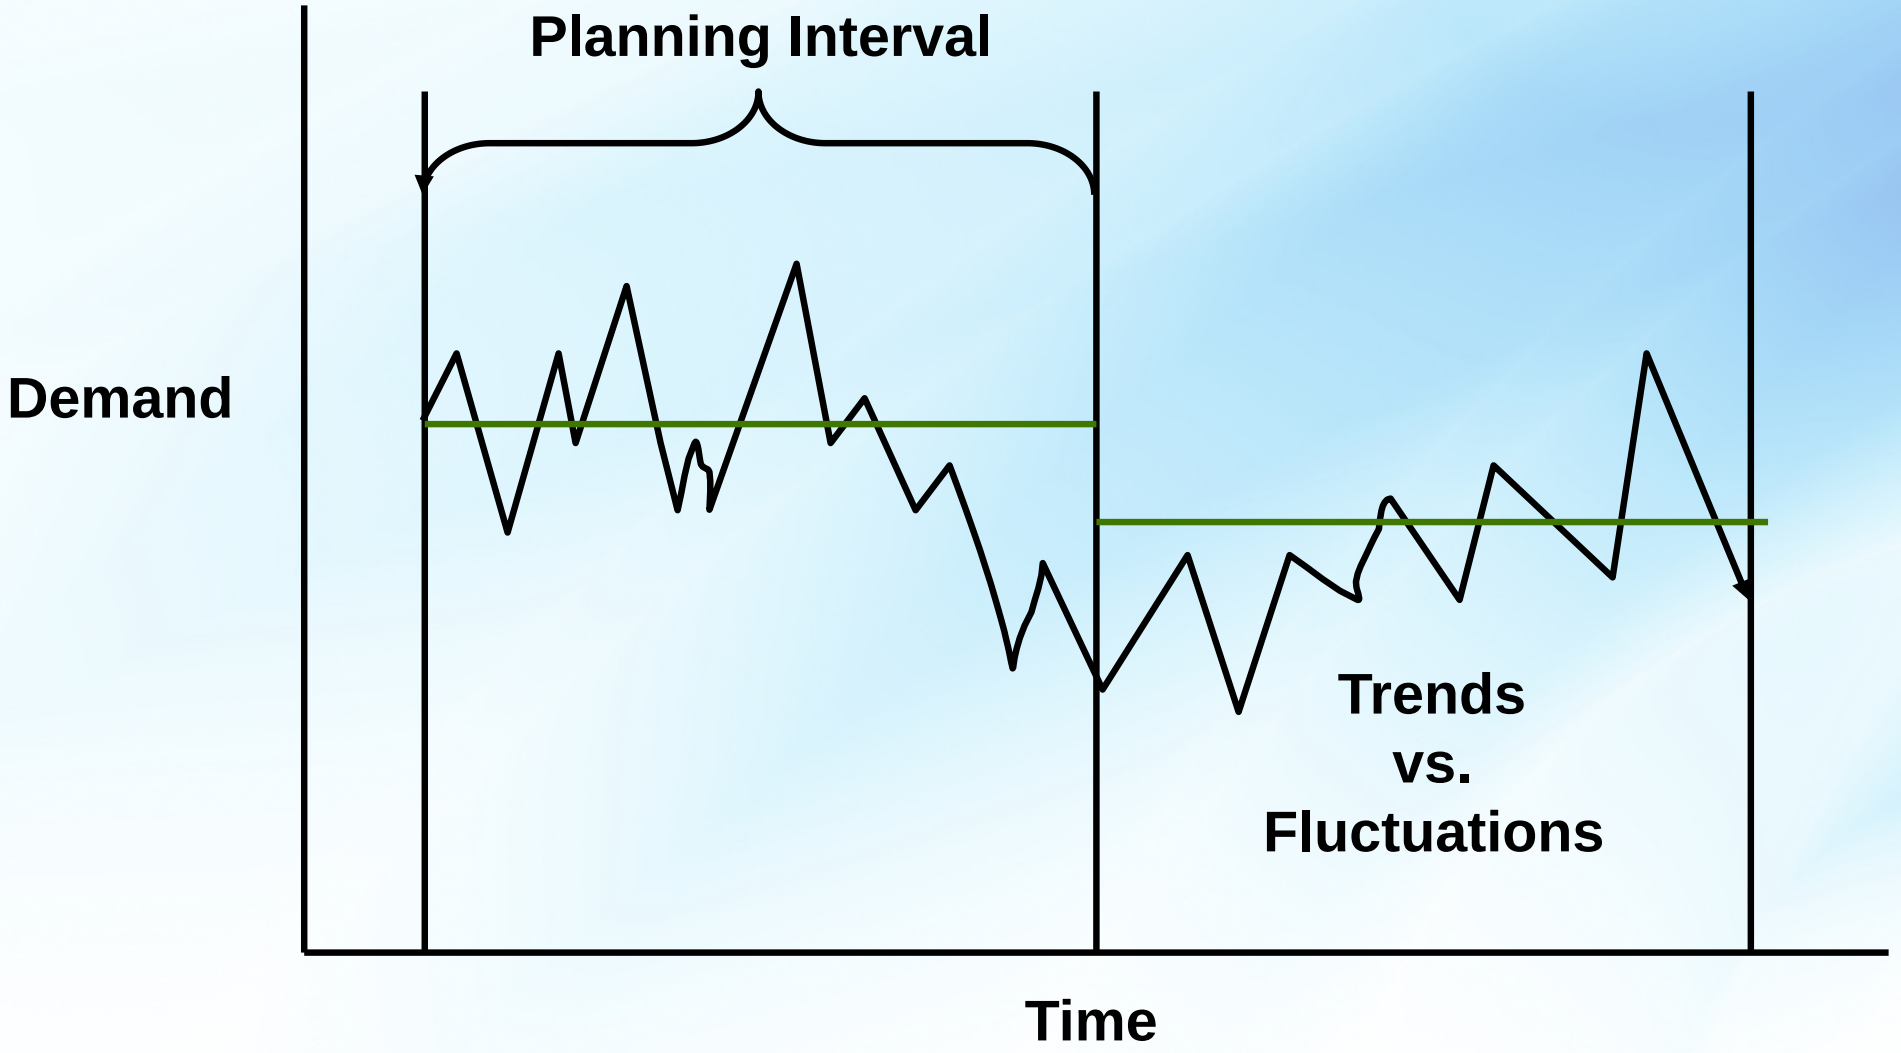
©2013, ILS. All rights reserved

Ideal 3 – One Pace

Responding to customer demand

©2013, ILS. All rights reserved

Smoothing and Takt Pacing



©2013, ILS. All rights reserved

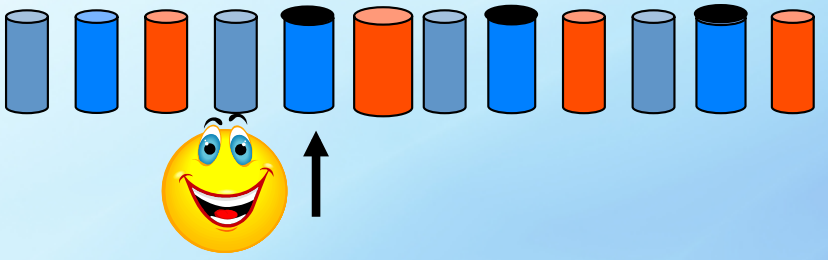
One Pace

- Cycle Time = average interval between work exiting a process
  - Cycle time is the actual work time required to do a task or a series of tasks
- Takt Time is the time allowed to take to complete the required work

$$\text{Takt Time} = \frac{\text{Scheduled Work Time}}{\text{(Shift Time – Lunch / Breaks – Planned downtime)}}{\text{Leveled Demand}}$$

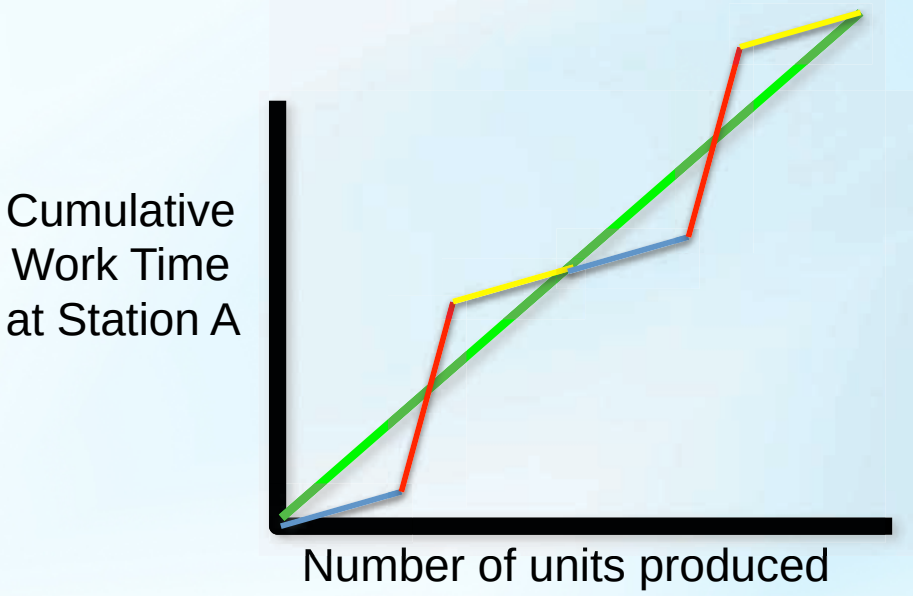
©2013, ILS. All rights reserved

Leveling



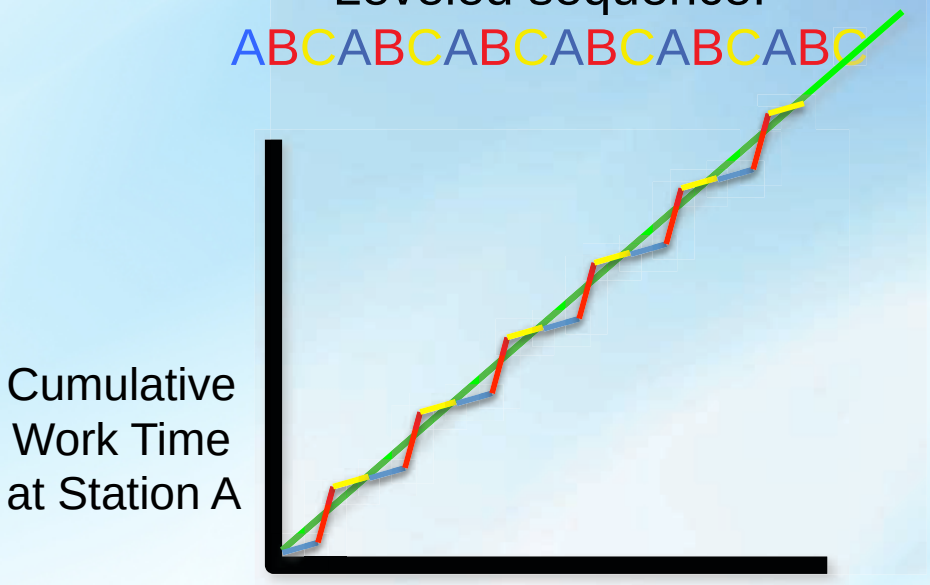
Poorly leveled sequence:

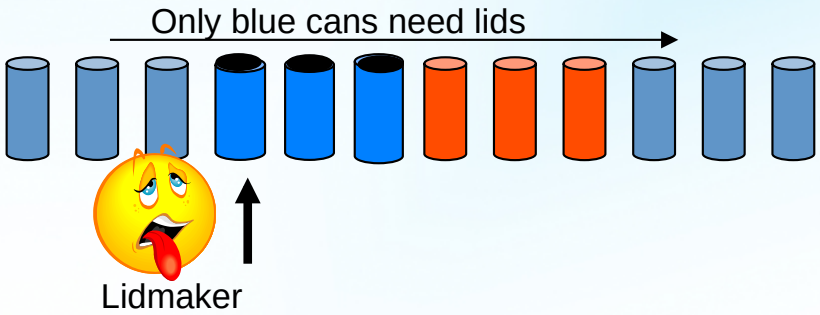
AAABBBCCCAAABBBCCC



Leveled sequence:

ABCABCABCABCABCABC





- Smaller buffers
- Easer to staff for average cycle time

©2013, ILS. All rights reserved

Random Arrival Process (Poisson)

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15

©2013, ILS. All rights reserved

Smoothed and Paced Order Launch

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15

©2013, ILS. All rights reserved

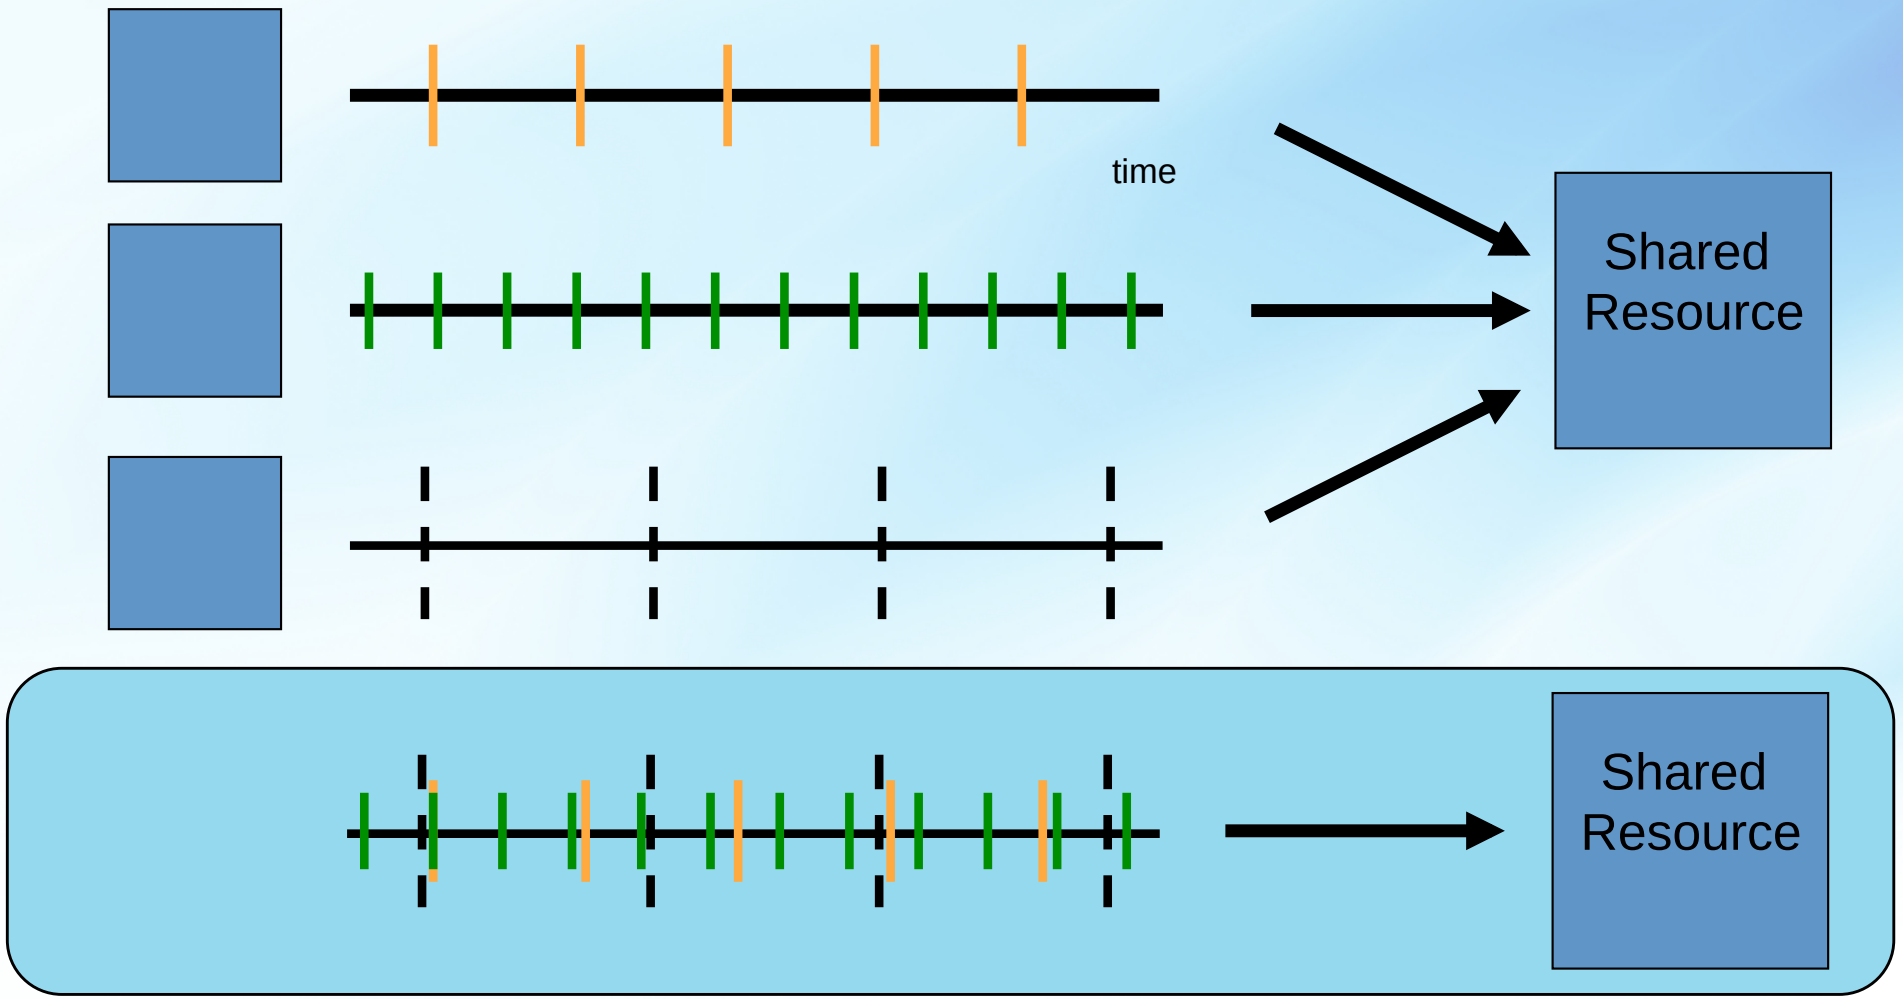
Ideal 4 – One Resource

Selective dedication of resources

©2013, ILS. All rights reserved

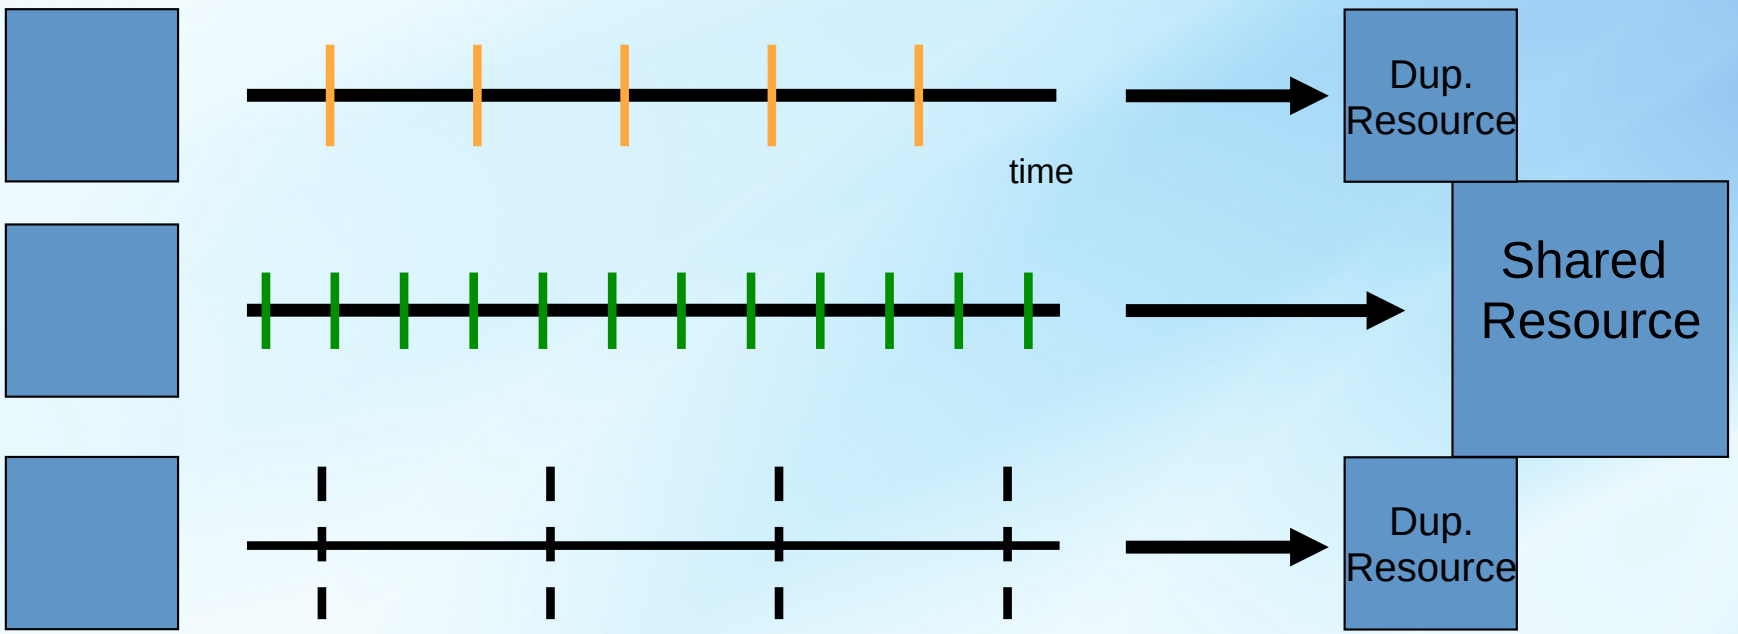
Ideal 4 – One Resource

Departure events for three products



©2013, ILS. All rights reserved

Ideal 4 – One Resource



©2013, ILS. All rights reserved

Round 4 – Dedication

Dedicate staplers to the cells

Rebalance the work in the cell

©2013, ILS. All rights reserved

Personal To-Do list

- Be the model
  - Set an example for others
  - Build trust
- Share your ideas
  - Write them down, talk them up
- Build relationships
  - Invite the leaders to your workstation
- Challenge each other
  - Can you do it faster, better, easier?
- Work as a team
  - Rely on each other; help each other
- Be a continuous learner
  - Understand the system
- Stay positive
  - Your attitude is contagious
- Start all over again

©2013, ILS. All rights reserved
